

SAFETY PRECAUTIONS

! Please follow these safety precautions in order to ensure proper installation and to prevent any bodily injuries and structural failures.

Please note that unit includes poles and rods that are made out of steel, which can cause bodily injuries and/or damages to the floor if dropped or held in an improper manner during assembly.

1. This unit is designed for use by keeping the poles fixed to the floor and the ceiling. Therefore, it is not safe for children to climb or hang on the unit. Children should be under adult supervision at all times to prevent any injuries.
2. Overloading the unit might cause it to become unstable and either tip or collapse, which may cause serious bodily injury and/or damage to personal possessions.
3. To prevent any accidents due to careless action, column should be inclined against the wall, not perpendicular to the floor.
4. We strongly recommend checking the product frequently for loose bolts or wobbling poles.

Installation Warning

- Plaster board wall, Plywood wall, or uneven ceiling will cause collapse, so please check the ceiling mount and lower post is to the floor mount.

Differentiating between the upper and bottom poles

- The upper post is thinner than the lower post. (Make sure the upper post is attached to the ceiling mount and lower post is to the floor mount)

Inserting Rods

- Inserting the rods into the holder. Please do not exceed 80kg on each rod.

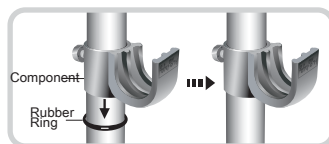

Difficulty with high ceiling?

- If you need an extension rod (about 50cm) due to higher ceiling, Please contact customer service.

Role of the Rubber Ring

- The rubber ring helps adjust the height of the fixtures and prevents them from slipping. The rubber rings should be inserted underneath each shelf bracket.

(The rubber rings inserted underneath the shelf brackets are not visible after installation.)

If components are damaged

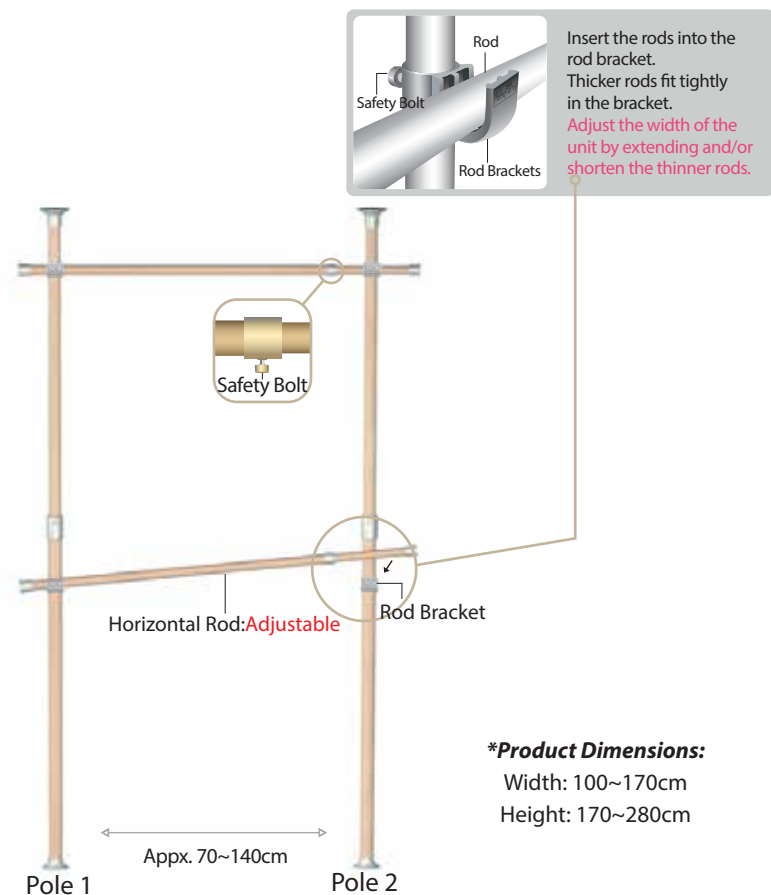

- If components are damaged or lost during delivery process, Contact customer service.

INSTALLATION OF POST & OTHER COMPONENTS II

STEPS OF INSTALLATION

- ① Set the poles upright and distance them apart to the desired width of the unit.
- ② After keeping the rod brackets level, fit the rods into the rod bracket as shown in the diagram.
- ③ Adjust the height of the rod brackets to the desired height using rubber rings and then gently tighten the safety bolt in the back by hand.
